

Parachutage Parachuting

585 kg seulement, les roues calées, la carrosserie simplement mais solidement sanglee au plateau, la Méhari "armée" est parachutable n'importe où facilement et sans risque. (Essais techniques réalisés au centre aéroporté de Toulouse.)

The Méhari "armée" weighs only 1,300 lb. Simply but firmly strapped to its landing platform, it can be parachuted almost anywhere without risk. (The Méhari has been tested under stringent condition at the Airbone Center in Toulouse, France.)
